

### **"The Energy Report - 100% Renewable Energy by 2050", February 2011**

Scenario by WWF and Ecofys, showing that a transition is not only possible but also cost-effective, providing energy that is affordable for all and producing it in ways that can be sustained by the global economy and the planet. The 1st part seeks to generate a discussion around the comprehensively researched scenario that is presented in the 2nd part, conducted by project partner consultancy Ecofys.

Download the report 256 p. pdf file (16 MB) from WWF's homepage:

[wwf.panda.org/energyreport](http://wwf.panda.org/energyreport)

### **"Energy [R]evolution: A Sustainable World Energy Outlook", 2010**

Scenario by Greenpeace and EREC provides a detailed practical blueprint for cutting carbon emissions while achieving economic growth by replacing fossil fuels with renewable energy and energy efficiency.

Global CO<sub>2</sub> emissions under the Energy [R]evolution scenario would peak in 2015 and drop afterwards. Compared with 1990 CO<sub>2</sub> emissions will be more than 80% lower by 2050 if the energy supply is based almost entirely on renewable energies. By 2050 around 95% of electricity could be produced by renewable energy.

Download the report pdf file (9 MB) from Greenpeace's web site:

[http://www.energyblueprint.info/fileadmin/media/documents/2010/0910\\_gpi\\_E\\_R\\_full\\_report\\_10\\_lr.pdf](http://www.energyblueprint.info/fileadmin/media/documents/2010/0910_gpi_E_R_full_report_10_lr.pdf)

### **"Energy [r]evolution", Greenpeace, 2008**

The scenario comes close to a fossil fuels phase-out by aiming for a 80% CO<sub>2</sub> emissions reduction by 2050.

### **"Carbon-constrained scenarios": Cired, Enerdata, Leppii, IDDRI, 2009**

Reduction of the world emissions in 2050 from two-thirds to three quarters of the 1990 level.

Download the report pdf file (0.8 MB, 89 pp.) from IDDRI's web site:

### **"Deciding the Future: Energy Policy Scenarios to 2050", World Energy Council, 2007**

This study works out 4 general scenarios of the world in 2050, all of them indicating an emission growth.

Download PDF file from the WEC's website: pdf file (1.5 MB, 104 pp.) at:

### **"Shell Energy Scenarios to 2050", Shell, 2008**

Two scenarios are outlined: The first one "Scramble" is a quite pessimistic one and in the blueprint scenario, global CO<sub>2</sub> emissions would be capped by 2020 and subsequently begin to decline to 2000 levels by 2050.
